About

BIOTECH EXPRESS

The Monthly News Magazine of BioSciences

BIOTECH EXPRESS Magazine(BEM) is providing latest updates of Biotechnology to Indian and International Biosciences Students and Professionals. BEM provides Current Biotechnology News, Opinions and Notices about Biotechnology research, Biotechnology products, Biotechnology Applications, Biotechnology Jobs, Careers in Biotechnology, Biotechnology Industry, Biotechnology Conferences, Biotechnology Business, Biotechnology R&D and Biotechnology Funding Grants available from various Departments and Centres of Biotechnology.

Praj HiPurity Systems introduces BioWiz Smart Bioreactor for the biopharma industry

Mumbai, January 2013: Praj HiPurity Systems (formerly Neela Systems), Praj Group Company, introduced 'BioWiz' Smart Bioreactor, which will help the biopharma industry meet requirements of various bio processes in laboratory, pilot and commercial units. BioWiz Bioreactor benchmarks international standards and delivers superior operational features and advantages required in today's global pharmaceutical industry. The 'Smart' aspect of this Bioreactor lies in the various innovative and smart features.

Gamma (γ) Irradiation: An innovative avenue for dry fish preservation

M.A. Bhattacharya, V.A. Mulya, M.P. Patel, P.R. Tark and K.G. Banerjee
Dept. of Food and Food Process Technology, College of Fisheries, Sardar Vallabhbhai Patel University
Mumbai-400 002, Gujarat, India
*Email: mahabhat@rediffmail.com

Abstract:

Study was conducted to determine the effects of gamma radiation on microbiological qualities of dry salted rohu fish (*Labeo rohita*) collected from fish drying plant. Results of microbiological analysis showed that total plate count in non-irradiated rohu fish was 8.0×10^6 cfu/g (log 6) which was significantly reduced to 1 log at 1.0 kGy, 2 to 3 logs at 2.0 kGy and 3 to 4 logs at 3.0 kGy gamma radiation. *Staphylococcus* (*Staphylococcus*) count was reduced to non-irradiated rohu fish 2.0×10^5 cfu/g (log 5) as compared to irradiated with 1.0 kGy (2.0×10^4 cfu/g log 4), 2.0 kGy (2.0×10^3 cfu/g log 3) and 3.0 kGy (2.0×10^2 cfu/g log 2) on dry fish. *Shewanella*, *Salmonella* & *Shigella* and *E. coli* were not detected in experimental fish samples during investigation. Total fungal count was found to be 5.0×10^5 cfu/g (log 5) in non-irradiated rohu fish which was totally eliminated in 1.0 kGy irradiated samples. These results indicate that, gamma radiation dose of 1.0 kGy and 2.0 kGy had a significant ($P < 0.05$) effect on preservation of dry salted rohu fish, decreasing microbial load and improving safety from microbial contamination through use food without compromising with its quality and safety.

Keywords: Gamma (γ) irradiation, Rohu fish (*Labeo rohita*), Microbiology, Preserving microbial contaminants, Food safety.

How to submit articles in Biotech Express Magazine
